## **Technical Data Sheet**

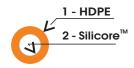

### **DESCRIPTION, APPLICATION**

# Microduct DuraMicro DB 10/6 mm

Microduct DuraMicro DB is intended for protection of optical microcables. Stuctural part (1) is made from high density polyethylene (HDPE). Inner surface (2) is made from permanent sliding material Silicore™ with a very low coefficient of friction and standardly with fine ribs. Outer microduct's surface is smooth. Microduct is not designed for permanent inner pressure.

Wall thickness and material classify the microduct as a Direct Burial (DB). Installation methods and conditions are described in the Installation manual. The microduct can be supplied also as a part of bundles  $DuraFlat^{TM}$  and DuraMulti.

The quality management system of Dura-Line CT is certified acc. to ČSN EN ISO 9001. Microduct does not

contain dangerous chemicals in accordance to the Directive 2006/1907/EC (REACH). Microduct meets requirements of the Directive 2002/95/EC (RoHS)-content of lead, cadmium, mercury,  $Cr^{v}$ , PBB, PBDE.

### **LEGISLATION**

The details to parameters are in company standard CWS 103-02.

#### **PARAMETERS**

| Parameter                              | Value                                 | Standard, conditions                                 |  |  |  |
|--|---------------------------------------|--|--|--|--|
|  |                                       | <u>'</u>   |  |  |  |
| Outer diameter (OD)                    | 10±0,1 mm                             | CWS 103-02   |  |  |  |
| Inner diameter (ID)                    | min. 5,9 mm                           | CWS 103-02   |  |  |  |
| Wall thickness (WT)                    | min. 1,9 mm                           | CWS 103-02   |  |  |  |
| Ovality                                | max. 5%                               | CWS 103-02, before coiling                           |  |  |  |
| Blown ball test (BB test)              | pass                                  | CWS 103-02, ball diameter 5,0 mm                     |  |  |  |
| Inner coefficient of friction          | max. 0,1                              | CWS 103-02   |  |  |  |
| Burst pressure                         | min. 70 bar                           | ČSN EN ISO 1167-1, 2                                 |  |  |  |
| Visual examination                     | free from defects                     | CWS 103-02   |  |  |  |

# Microduct DuraMicro DB 10/6

- Standard is a basic material version convenient for most applications.
- UV stabilized is more resistant to ultraviolet radiation. Storability is prolonged to 24 months at Central Europe outdoor conditions.
- Antistatic lower electrical surface resistance.
- Antirodent is more resistant to rodents because of special repellent additives.
- Preinstalled pulling cord with tensile strength min. 300 N.

Microduct is supplied in natural translucent version or in wide scale of following RAL list. Longitudinal stripes with the same color are another possibility.

Microduct is printed in whole length according to customer requirement. Printing color is contrasting to microduct color. Printing can be doubled in opposite sides as an option. Printing scheme is repeating

#### Example of printing scheme:

DURA-LINE CT DuraMicro DB 10/6 mm SILICORE 03/2009 LOT No 12345678 0000 m > I<

Microduct is wound on disposable drum (MTB) and coil is wrapped by stretch film. Microduct's ends are protected by plastic caps protecting them from impurities penetrating into microduct. End of microduct is minimally 10 mm under the flange edge. MTB flanges are regularly made from chipboard and have to be protected from moisture.

Option-MTB flanges can be made from Oriented Strand Board (OSB) which is waterproof.

MTB core diameter is 415 mm.

All drum dimensions are informative values.

Drum width is measured near center in place of axis. The periphery width can be higher up to 10% because of pressure winded microducts.
